

Online results

It is reasonably easy to set up a local Wifi network so that any user with a smartphone, tablet or laptop can look at live results.

The extra equipment needed is a usb-ethernet adapter, a wireless router and the laptop "Dalrulzion". At a small event the following setup can be used (although the laptop that the printers and download unit connect to could be changed)

Put the Wireless router as high as possible to increase its range.

The settings in AutoDownload are quite simple.

On Dalrulzion

Results

- HTML results
- Select the directory E:/results
- Export Type either
 - o Each Class or a separate page
- or
 - o One page for all results
- Timer for export : 15 seconds

Click on Start Export on Timer

Minimise that window.
